### Box Hill Town Hall

Iconic landmark located in Melbourne's City of Whitehorse.

**Consultant** Irwinconsult

**Installation** OP Industries

### Fitness First

Supplier to Fitness First since early 2004.

**Consultant** IAQ Consulting

## Client & Industry comments...

"We specified Air Change heat exchangers at Parklea Leisure Centre. Thermal efficiency is very high, saving the Council around \$70,000 a year in energy costs and 300 tonnes of CO<sub>2</sub> per annum"

Paul Stevenson, Principal, Stevenson & Associates

"Engineered Environments Pty Ltd have been applying Air Change enthalpy heat exchangers and 100% outdoor air package units for a period of five years with outstanding results, not only resulting in better indoor environments but ongoing energy cost savings for the end user. On each occasion the systems in which we have incorporated the Air Change enthalpy heat exchangers have performed better and exceeded the design parameters resulting in a greater anticipated job performance with greater ongoing energy/operating cost savings"

Rob Shoemark, Managing Director, Engineered Environments

"We chose to specify the Air Change Technology system on the Lend Lease Melbourne Headquarters because we needed a product which allowed us to provide 100% outside air while still meeting stringent energy efficiency and humidity control criteria"

Garrit Schot, Associate, Cundall

"At Fitness First we manage a large portfolio of facilities. These buildings demand careful selection of equipment, focusing on energy efficiency, occupant comfort and an acceptable return on investment... Working with Air Change we achieve all of these goals"

Roy McDowall, General Manager Property & Construction – Fitness First

"We are very pleased with the state of the art technology recommended to us by our architects and consultants. The strengths of the Air Change technology lie in excellent efficiency, huge energy savings and plant space minimisation"

Keith R Smith, Property and Project Manager, Presbyterian Ladies College

"We are happy with the operation of the system and more impressed by the simplicity in integration the units provide and the versatility of application. The ability to maximize the outside air without adding to the energy cost, provides improved internal conditions and longevity to the structure"

Sam Thorn, BRT Consulting

"The significant cost saving on the hardware & the anticipated on-cost saving is very impressive & would be worthy of investigation in any new installation of air conditioning in schools"

Richard Ruddell, Principal, Redlynch State School

"Warm water and air are both crucial to the swim school's needs – without them, we don't have a business. From dehumidification with the Air Change PoolPac system, to pool heating and even underfloor heating with the Rotex units, Inform Energy were great"

Richard Calahan, General Manager, Carlisle Swimming

"The units are a packaged system, which makes installation similar to a conventional system, and far simpler than installing various components and supply and exhaust fans"

Scott Duval, Enertec

"With the Air Change ERV's you are halving your installation and running costs. It's giving you a much larger volume of affordable outside air than a traditional system"

Lars Bispekov, K.A.L.I. Trading Pty Ltd

## Randwick Labor Club

Eastern suburbs favourite Club near Randwick Racecourse

Consultant Engineered Environments

## University of Sydney

Australia's first University – founded in 1850
